JOSÉ ALBERTO HERNÁNDEZ MOYA

Senior Full Stack Engineer | Tech Lead | AI Architecture | OnBase Certified

+506 8875 5280 | jahmpj@gmail.com | linkedin.com/in/josemoyacr/ | github.com/JoseMoyaCR

Costa Rican national, currently based in Mexico City — seeking 100% remote roles with Costa Rican employers. Same time zone as Costa Rica year-round (GMT-6; neither country observes daylight saving). Already delivering remotely for a Costa Rican employer.

PROFESSIONAL SUMMARY

Senior Full Stack Engineer and Tech Lead with 10+ years delivering enterprise solutions for Costa Rican banking, financial cooperatives, and public-sector clients. Deep domain track record across OnBase credit origination, Factura Electrónica compliance, and BCCR digital-signature integration. Currently Development Supervisor and AI Architect, building a .NET document-capture platform with self-hosted vision-language inference on private GPU infrastructure. Working 100% remotely from Mexico City for a Costa Rican employer with full time-zone overlap; seeking remote Senior Engineer, Tech Lead, or AI Architecture roles.

WORK EXPERIENCE

Development Supervisor & AI Architect | SEA Servicios Múltiples

San José, Costa Rica — remote from Mexico City | Jul 2025 – Present

- Supervise the development team and own technical direction for the platform's AI architecture, from inference infrastructure through production promotion criteria.
- Architected DocumentPipelineAI, an automated document capture platform (IDP/ADE) on .NET 10, Dapper, and SQL Server, with self-hosted vision-language model inference on a private AWS GPU node — designed AI-first but not AI-authoritative, keeping deterministic validation, explicit abstention, and full traceability in authority over every published value.
- Cut per-page processing latency from ~59s to ~46s (−22%) by root-causing three configuration and implementation defects; the highest-impact correction eliminated ~13s per page of model reloading into GPU memory.
- Diagnosed an availability failure attributed to the network and proved the real cause was a default HTTP client timeout silently overriding the configured provider timeout; locked the correction with a mutation-verified regression test.
- Built inference-avoidance gates — native-text fast path, per-page SHA-256 hashing, cache keyed on content hash plus model and prompt version, and pre/post-model quality gates — resolving roughly 40% of requests without invoking the model.
- Instrumented per-invocation inference telemetry (tokens, duration, throughput, prompt version) in SQL Server and used it to correct a prior estimate of where per-page time was actually being spent — showing that model generation accounted for ~76% of it rather than the ~42% assumed — which redirected optimization effort onto the right component.
- Defined the evaluation and acceptance criteria for replacing the model in production, including a stratified test corpus with verified ground truth and partitioning by document to avoid leakage; established per-digit accuracy as a rejection criterion independent of aggregate error rate, after showing that a 1% character error rate corrupts ~40% of 50-digit electronic-invoicing keys.
- Researched and documented the platform's optimization roadmap — alternative serving engines, smaller specialized OCR models, and quantization trade-offs — delivering a go/no-go assessment per option together with the evidence still required before committing to any of them.

Full Stack Engineer | Scotiabank

San José, Costa Rica | Nov 2022 – Jun 2025

- Implemented segmented notification parameterization in SGC, the customer case-management platform used across Scotiabank Costa Rica's full branch network, enabling client communications tailored by customer segment.
- Drove the software-currency modernization of SGC, migrating the SQL Server database, Windows Server infrastructure, and .NET runtime to current supported versions while hardening security controls — reducing technical debt and eliminating end-of-life compliance risk on a mission-critical branch-facing system.
- Supported and evolved Quickpass, leading the platform upgrade to Costa Rica's Factura Electrónica 4.0 standard (Ministerio de Hacienda), ensuring regulatory compliance ahead of the enforcement deadline and uninterrupted tax-document operations.
- Contributed to the Java modernization of Insures XXI (Java 8 / WebSphere to Java 17 / TomEE) and collaborated with distributed squads across Costa Rica, Mexico, and Canada under Scrum, participating in code review and pairing in a bilingual delivery environment.

Tech Lead & Full Stack Developer | SEA Servicios Múltiples

San José, Costa Rica | Aug 2017 – Oct 2022

- Led a team of 5 engineers under Scrum across concurrent engagements for financial cooperatives and public-sector clients, defining delivery standards, code-review practice, and technical direction.

- Architected and implemented OnBase credit-origination workflows ("fábrica de crédito") for Coopeande and Coopealianza — two of Costa Rica's largest financial cooperatives — automating document capture, routing, and approval stages across the loan lifecycle.
- Designed and delivered ControlPAS end-to-end for Costa Rica's Ministerio de Seguridad Pública and RACSA (state-owned telecom), covering both the web portal and the underlying OnBase workflows used as document manager and procedure-tracking engine.
- Engineered ControlPAS's integration with Banco Central de Costa Rica (BCCR) digital-signature infrastructure, building a custom signer component that enabled legally binding digital signing of government resolutions and raised the system to national digital-signature compliance.

Full Stack Developer | RegionalSoft
San José, Costa Rica | Jun 2013 – Jul 2017

- Designed and built a responsive web application with SEO optimization and dynamic data visualization.
- Led the Windows 10 migration of a desktop product and extended the FileMaster product with new modules, improving stability and data integrity through validation and referential-integrity controls.

CERTIFICATIONS

- OnBase Certified Workflow Engineer for Partners — Hyland (Oct 2024)
- Certified Scrum Master — MAPO (Sep 2018)
- Microsoft Certified Professional (MCP) — Microsoft (May 2014)

TECHNICAL SKILLS

Languages: C#, Java, JavaScript, TypeScript, Python, VB.NET, T-SQL
Backend: .NET 10 / .NET Core / .NET Framework, ASP.NET MVC, Razor Pages, Spring Boot, REST APIs, Entity Framework, Dapper, LINQ, ADO.NET, Stored Procedures
AI Integration & Document Intelligence: Vision-language model (VLM) integration, OCR / IDP / ADE document extraction, self-hosted model serving (Ollama), prompt versioning and cache identity, inference telemetry, quality gating, explicit abstention, human-in-the-loop review design
Performance & Reliability: Latency instrumentation and root-cause analysis, p50/p95 measurement, caching strategy, timeout and retry design, regression and mutation testing
Evaluated, not yet deployed: vLLM serving, speculative decoding, quantization trade-offs (K-quants, FP8, AWQ), QLoRA fine-tuning — assessed as candidate interventions with documented go/no-go criteria
Frontend: jQuery, Kendo UI (Telerik), Bootstrap, HTML5, CSS3, Figma
Data: SQL Server, query optimization, relational database design, telemetry schema design
Cloud & Infrastructure: AWS EC2 (GPU g6 / NVIDIA L4), VPC and security groups, CUDA, Linux (Ubuntu Server)
DevOps & Tooling: Git, CI/CD, Scrum, DevOps practices, code review, regression and mutation testing
Automation / ECM: OnBase Workflow (Certified), UiPath, Jidoka, Appian
Realtime / Integration: SignalR, Web Services, Digital Signature (BCCR integration)
Domains: Banking, Financial Cooperatives, Public Sector, Insurance, Document Capture

EDUCATION

- Systems Engineering (in progress) — Universidad Americana (UAM), Costa Rica
- Embedded Systems Technician — Universidad Fidélitas (2024)
- Creative UX/UI Specialization — Universidad Véritas (2021)
- Mobile Development (Xamarin) — Universidad Cenfotec (2020)

LANGUAGES

- Spanish — Native
- English — B1, working toward B2. Comfortable with technical documentation, written and asynchronous collaboration.
- Portuguese — A2
